

Key Vocabulary	Definition	Example
2D Shapes	'A flat shape'. Any shape that can be laid flat on a piece of paper.	
Sides of a shape		
Vertices	A vertex (plural: vertices) is a point where two or more lines meet. It is a Corner.	
Line of symmetry	Something is symmetrical when it is <b>the same on both sides</b> . A shape has symmetry if a central dividing line (a <b>mirror line</b> ) can be drawn on it, to show that both sides of the shape are exactly the same.	
Sorting	Sorting shapes according to the number of faces, sides, vertices or edges.	
Clockwise and Anti-clockwise	If you move in a circle in the same direction as the hands of a clock, this is clockwise. If you move in the opposite direction, this is anti-clockwise.
